Compounded Control Drugs for Office Use

Stokes has received many questions about controlled drugs being compounded and sold to hospitals and veterinary offices for office administration. Following are some answers you may find helpful.

Does Stokes have a DEA manufacturer license?
Yes, our DEA manufacturer license number is RS0447979. It is registered under Stokes Healthcare.

Why is this required?
This allows a compounding pharmacy to compound controlled medications to be sold and administered in a hospital or veterinary practice in states that permit office use. (A DEA manufacturer license does not mean we are a drug manufacturer such as Pfizer®. This license is only for reporting of controlled compounded medication for office use.)

What products are offered through Stokes' DEA manufacturer license?

- Buprenorphine 0.5 mg/mL Injection, 10 mL & 50 mL
- Buprenorphine 0.5 mg/mL Suspension, 120 mL
- Buprenorphine 1 mg/mL Transdermal, 1 mL syringe
- Butorphanol 10 mg/mL Injection, 50 mL
- Diazepam 5 mg/mL Injection, 30 mL
- Diazepam 10 mg/mL Injection, 30 mL
- Tramadol 10 mg Mini-Med Tablets, 100 count bottle
- Tramadol 20 mg Multi-Med Tablets, 100 count bottle
- Tramadol 20 mg/mL AQ Bitter-Masking Suspension, 120 mL

What if I want to prescribe a controlled drug not on the list for a patient?
Stokes will continue providing customized compounded patient specific medication through our pharmacy DEA license. Our pharmacy license allows us to compound patient specific controlled and non-controlled medication for individual patients in any state.

Protect your practice. If you are having controlled medications compounded for your office make sure your compounding pharmacy has a DEA manufacturer license.
