

# Diazepam VR Suppositories

**Stokes Pharmacy**  
TECHNOLOGY AND TRADITION

The pelvic floor is a group of muscles that support the organs in the pelvis including the bladder, uterus and rectum. These muscles also surround the vagina and urethra. Contraction and relaxation of these muscles is important for proper function of the bladder and rectum. An inability to relax these muscles, increased muscle tension, spasms and uncoordinated muscle contraction may be the result of high-tone pelvic floor dysfunction (HTPFD).

Symptoms of HTPFD may include pelvic pain, pain with intercourse, poor urinary stream, urinary frequency, urinary urgency and constipation.

***Stokes Pharmacy has developed a proprietary formula for Diazepam Suppositories already used by numerous urologists and urogynecologists.***

Oral formulation of Diazepam has been commonly recommended for the treatment of HTPFD, however, Diazepam Suppositories have been shown to result in localized relief of symptoms with a lower incidence of systemic side effects.

***A retrospective study by the Brown School of Medicine and The Pelvic and Sexual Health Institute of Philadelphia has shown that diazepam suppositories, used vaginally, can effectively treat HTPFD.***

***"25 out of 26 patients reported subjective improvement with suppository use."***

#### **Recommended Directions:**

One suppository used vaginally (or rectally) at bedtime for 30 days, following re-evaluation; therapy may be maintained with 1 suppository as needed 3 times a week.
