

It's hard to get up and running when it hurts.

We understand. We know horses, and we can help.

**PENTOSAN Polysulfate...
is available in a 250mg/mL
concentration (6ml vial)**

- Rather than just treating the pain and inflammation of osteoarthritis (like NSAIDs and corticosteroids), Pentosan Polysulfate Injection will stimulate cartilage growth and synovial fluid production thus improving joint stability.
- Pentosan Polysulfate can be used IM and is usually administered as four separate weekly injections.
- Is useful for the treatment of Osteoarthritis (OA) as well as Osteochondrosis (OCD).

***Rather than simply masking pain,
Pentosan Polysulfate directly stimulates joint
healing and repair.***
