PENTOSAN

08/09

Pentosan Polysulfate (PPS) does not just mask the pain...

- Derived from a natural plant source, PPS treats OA (osteoarthritis) directly and indirectly.
- PPS causes an increase in blood supply beneath the cartilage providing relief from pain.
- When inflammation occurs it causes cartilage degeneration. PPS reduces this by directly and indirectly affecting inflammatory mediators.
- PPS has been shown to stimulate the synthesis of proteoglycans (Important for the ability of cartilage to withstand compression.)
- Dosing: 3 mg/kg IM or SC with an interval of 5-7 days between injections

- Plumb's Veterinary Handbook, 6th edition

Available in:
100 mg/ml
10ml= \$35.00
