

How to Administer Eye Drops

1. Remove any discharge around the eye with a cotton ball moistened with saline solution.
2. Firmly grasp the pet under the chin and lift its chin and eyes towards the ceiling. Position your other hand over the pet's head bringing the dropper bottle just above the eyes.
3. Gently pull back upper and lower eyelids.
4. Squeeze the eye drops into the inner corner of eye taking care not to touch the dropper to the eye or eye surface.
5. Continue to hold the head back for a moment or two while the drops disperse over the whole eye surface.
